INFO-TECH CITROËN Sport C2 R2 MAX N° 03/08.

Subject : C2R2 and C2R2 MAX gearbox instructions.

Dear Customers,

We ask to pay attention about C2R2 and C2R2 MAX gearbox assembly instructions below.

Gearbox oil to use :

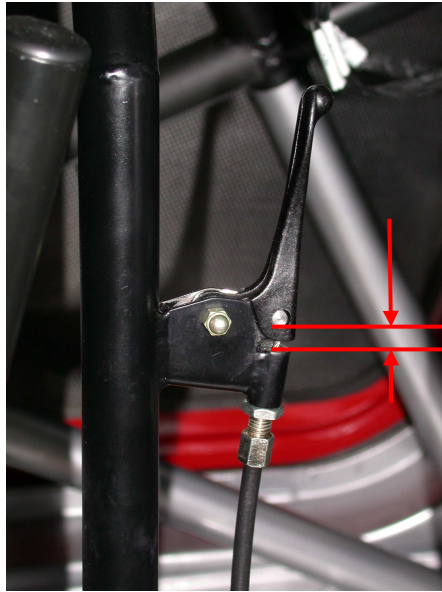

TOTAL BV 75W90 Transmission H50168B.

Reverse gear unlocking cable :

- Reverse gear unlocking cable setting (as shown on the picture below) :

When the gearbox is assembled on the car, pay attention that the cable is not tight, and you have a free play on the lever as well.

! In race conditions (engine and gearbox warmed), check if the free play in the lever is still there !

2 mm minimum !!!

In the opposite way, the locking is not active. During a downshifting, you can go to neutral, and to reverse gear as well.

Reverse gear unlocking cable assembly :

The cable has to be free inside the car, and inside the engine place. Never attache it to the gearbox link, or the lever.

In the opposite way, during a downshifting, the cable movement can produce a temporary unlocking of the barrel (this way neutral and reverse gear can be engaged).

Thank you for your attention.
